

Implementation Complete: Teaching Events Admin Updates

☒ All Changes Completed

Summary of Implementations

1. Teacher Assignment Dropdown ☒

- **Location:** `TeachingBasicInfoTab.tsx`
- **Feature:** Admin can now select a teacher from a dropdown when creating/editing teaching events
- **Data Flow:**
 - Teachers fetched from backend via `getTeachingEventTeachers()`
 - Teacher ID passed to backend as `teacherId`
 - Teacher info validated on backend before saving

2. Conditional Meeting Link (Online Events) ☒

- **Location:** `TeachingAdvancedTab.tsx`
- **Condition:** Shows only when `teachingMode === 'Online'` or `teachingMode === 'Hybrid'`
- **Validation:** Required for online/hybrid events, optional for offline
- **Backend:** Stored as `meetingLink` in event document

3. Conditional Location Fields ☒

For OFFLINE Events:

- Country selector (required)
- City autocomplete (required)
- Full Address field (required)
- Latitude & Longitude (optional, for coordinates)

For ONLINE/HYBRID Events:

- Country selector (required) - for SEO
- City autocomplete (required) - for SEO
- No address field (not needed for virtual events)
- Clean blue-highlighted card explaining these are for SEO/discovery

4. Backend Mapping ☒

- Frontend: `teachingMode ('Online' | 'Offline' | 'Hybrid')`
- Backend: `eventType ('Online' | 'Offline')`
- Mapping: Hybrid is sent as Online to backend
- Data transformation happens during form submission

5. SEO Optimization ☒

- Country and city are now appended to backend for all events
- For online events: Used as service location in SEO
- For offline events: Used as physical location in SEO
- All events include `seoMeta` with title, description, and keywords

File Changes Summary

Files Modified:

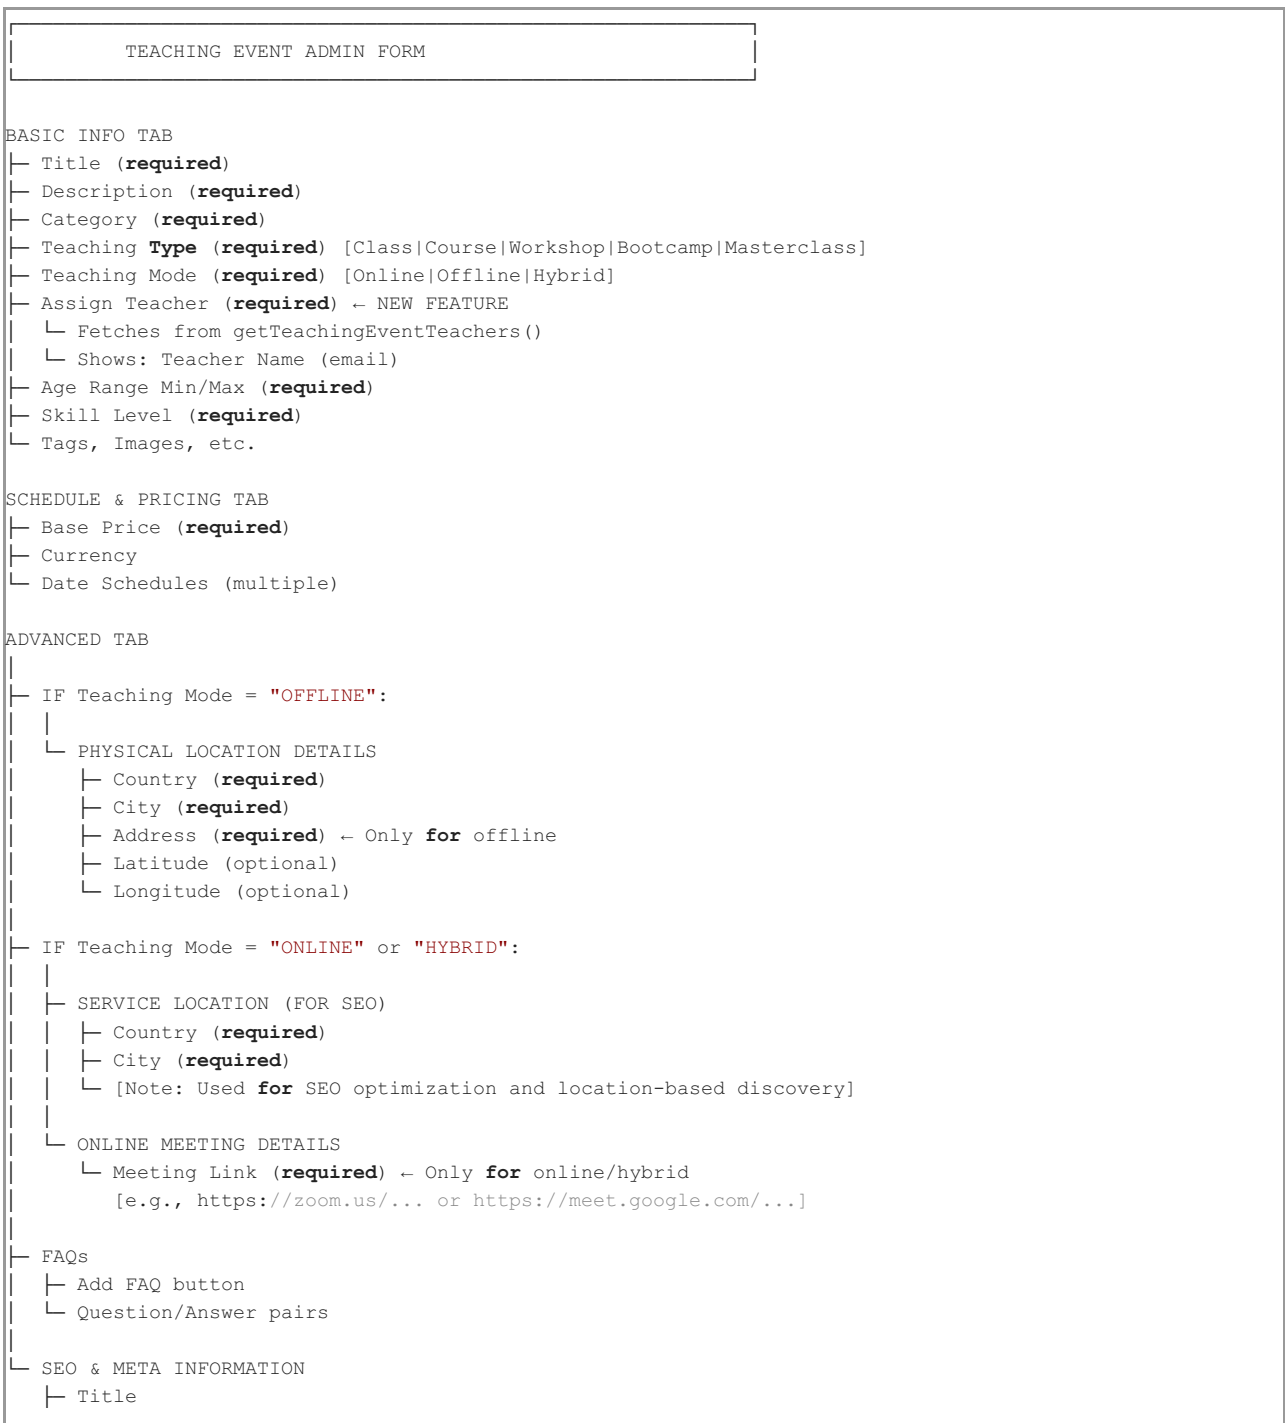

1. `frontend/src/components/admin/TeachingBasicInfoTab.tsx`
 - Added teacher dropdown selector
 - Changed layout from 2 columns to 3 columns for Category, Type, and Teacher
2. `frontend/src/components/admin/TeachingAdvancedTab.tsx`
 - Renamed location section for offline to "Physical Location Details"
 - Added new "Service Location (for SEO)" section for online/hybrid events
 - Both sections include country and city selectors

- Offline section includes address and coordinates
- Online/hybrid section includes explanatory note

3. `frontend/src/pages/admin/AdminTeachingEditEventPage.tsx`

- Updated form submission to map `teachingMode` to `eventType`
- Made location address conditional (offline only)
- Made meeting link conditional (online/hybrid only)
- Updated data loading to map backend `eventType` to form `teachingMode`
- Updated validation rules:
 - Country required for all events
 - City required for all events
 - Address required for offline only
 - Meeting link required for online/hybrid only

Data Flow Diagram

- └ Description
- └ Keywords

FORM SUBMISSION

↓

DATA TRANSFORMATION

- └ **Map** teachingMode → eventType
 - └ 'Hybrid' → 'Online', others **as-is**
- └ Conditional location.address
 - └ Only **for** offline
- └ Conditional meetingLink
 - └ Only **for** online/hybrid
- └ Format all fields **for** backend

↓

BACKEND (update/create)

- └ Endpoint: PUT /api/admin/teaching-events/:id
- └ Receives:
 - └ eventType: 'Online' | 'Offline'
 - └ location: {country, city, address?, coordinates?}
 - └ meetingLink?: string
 - └ teacherId: ObjectId
 - └ ... other fields
- └ Validation:
 - └ Check teacherId **is** valid and active
 - └ Check dates **in** future
 - └ Store all data conditionally
- └ Response: Updated teaching event

↓

DATABASE (MongoDB)

- └ TeachingEvent **document**
- └ eventType: 'Online' | 'Offline'
- └ location: {
 - └ country: string
 - └ city: string
 - └ address: string (conditional)
 - └ coordinates: {lat, lng} (conditional)
- └ meetingLink: string (conditional)
- └ teacherId: ObjectId
- └ seoMeta: {title, description, keywords}

Testing Scenarios

Scenario 1: Create Online Teaching Event

1. Fill basic info
2. Select "Online" from Teaching Mode
3. Observe:
 - ☒ Teacher dropdown visible
 - ☒ Meeting link field appears
 - ☒ Service location (country/city) appears
 - ☒ Address field does NOT appear
 - ☒ Coordinates fields do NOT appear
4. Fill data and submit
5. Verify backend receives:
 - eventType: 'Online'
 - meetingLink: <url>
 - location.country: <value>
 - location.city: <value>
 - location.address: undefined
 - location.coordinates: undefined

Scenario 2: Create Offline Teaching Event

1. Fill basic info
2. Select "Offline" from Teaching Mode
3. Observe:
 - ☒ Teacher dropdown visible
 - ☒ Meeting link field does NOT appear
 - ☒ Physical location section appears
 - ☒ Country, city, address fields appear
 - ☒ Latitude/longitude fields appear
4. Fill data and submit
5. Verify backend receives:
 - eventType: 'Offline'
 - meetingLink: undefined
 - location.country: <value>
 - location.city: <value>
 - location.address: <value>
 - location.coordinates: {lat, lng}

Scenario 3: Create Hybrid Teaching Event

1. Fill basic info
2. Select "Hybrid" from Teaching Mode
3. Observe:
 - ☒ Teacher dropdown visible
 - ☒ Meeting link field appears
 - ☒ Service location (country/city) appears
 - ☒ Address field does NOT appear
4. Fill data and submit
5. Verify backend receives:
 - eventType: 'Online' (Hybrid mapped to Online)
 - meetingLink: <url>
 - location.country: <value>
 - location.city: <value>
 - location.address: undefined
 - location.coordinates: undefined

Scenario 4: Edit Existing Event

1. Load existing teaching event
2. **Verify:**
 - ☒ **Form data** pre-populated
 - ☒ Teacher ID pre-selected
 - ☒ Conditional fields show based on eventType
3. **Change** teaching mode (e.g., Offline to Online)
4. Observe:
 - ☒ Relevant fields appear/disappear
 - ☒ Address field becomes **optional**
 - ☒ Meeting link field becomes required
5. **Save** and **verify** backend update

Backend Compatibility

Already Implemented on Backend:

- ☒ eventType field supports 'Online' | 'Offline'
- ☒ meetingLink field supports URL strings
- ☒ location.country field is optional string
- ☒ location.city field is required string
- ☒ location.address field is string (can be undefined for online)
- ☒ teacherId field references Teacher model
- ☒ seoMeta field supports title, description, keywords

Validation:

- ☒ Teacher ID validation (exists and is active)
- ☒ Date validation (future dates)
- ☒ Location validation (based on event type)
- ☒ All necessary fields checked

Key Features

1. Teacher Assignment

- ☒ Dropdown shows all active teachers
- ☒ Displays teacher name and email
- ☒ Required field with validation
- ☒ Can be changed via dedicated endpoint

2. Smart Location Management

- ☒ Online events: Country & city for SEO
- ☒ Offline events: Full address + coordinates
- ☒ Hybrid events: Treated as online (meeting link + location)
- ☒ Clear UI that explains purpose of each location type

3. SEO Optimization

- ☒ Country and city auto-populated in location for all events
- ☒ SEO meta fields separate for custom optimization
- ☒ Auto-fallback to title/description if SEO fields empty
- ☒ Keywords auto-fallback to tags if not provided

4. Conditional Required Fields

- ☒ Meeting link: Required only for online/hybrid
- ☒ Address: Required only for offline
- ☒ Country/City: Required for all (SEO purposes)
- ☒ Proper validation messages

Ready for Production

All changes have been implemented and are ready for:

1. Frontend testing
2. Backend integration verification
3. End-to-end testing
4. Production deployment

Support & Issues

If you encounter any issues:

1. **Teachers not loading:** Check `getTeachingEventTeachers()` endpoint
2. **Data not saving:** Check backend validation in `updateTeachingEvent`
3. **Wrong event type:** Verify `teachingMode` to `eventType` mapping
4. **Missing fields:** Check that all required fields are filled
5. **Conditional fields not showing:** Check browser console for errors

See `TEACHING_EVENTS_ADMIN_UPDATES.md` for detailed implementation documentation.
