

Teaching Events Admin Updates - Implementation Summary

Overview

This document outlines the changes made to enable proper teacher assignment and conditional field display based on event type (Online/Offline) for teaching event management.

Changes Implemented

1. Teacher Dropdown in Basic Info Tab

File: frontend/src/components/admin/TeachingBasicInfoTab.tsx

Changes:

- Added teacher dropdown selector to the form
- Changed grid from 2 columns to 3 columns to accommodate:
 - Category
 - Teaching Type
 - **NEW:** Assign Teacher (dropdown)

```
<div className="grid grid-cols-1 sm:grid-cols-3 gap-6">
  {/* Category, Teaching Type, and Teacher fields */}
  <div>
    <label htmlFor="teacherId" className="block text-sm font-medium text-gray-700 mb-2">
      Assign Teacher <span className="text-red-500">*</span>
    </label>
    <select
      id="teacherId"
      name="teacherId"
      value={formData.teacherId}
      onChange={onInputChange}
      className={`w-full px-4 py-3 border...`}
    >
      <option value="">Select a teacher</option>
      {teachers.map(teacher => (
        <option key={teacher._id} value={teacher._id}>
          {teacher.fullName} ({teacher.email})
        </option>
      ))}
    </select>
  </div>
</div>
```

Features:

- Displays teacher full name and email in dropdown
- Teachers list is fetched from backend via `adminAPI.getTeachingEventTeachers()`
- Teacher selection is required (validation enforced)

2. Conditional Field Display Based on Event Type

File: frontend/src/components/admin/TeachingAdvancedTab.tsx

Changes:

A. For Offline Events:

- **Location Details Card** shows:
 - Country selection
 - City autocomplete
 - Address field (required)
 - Latitude & Longitude (optional, for coordinates)

B. For Online/Hybrid Events:

- **NEW Service Location (for SEO) Card** shows:
 - Country selection
 - City autocomplete
 - **Note:** These fields are used for SEO optimization and location-based discovery
 - No address field required

C. Online Meeting Link:

- **Online Meeting Details Card** (unchanged) shows:
 - Meeting Link input (Zoom, Google Meet, etc.)
 - This appears only for Online/Hybrid events

```
{/* Location for SEO - For Online/Hybrid */}
{(teachingMode === 'Online' || teachingMode === 'Hybrid') && (
  <Card variant="elevated" className="shadow-xl border-blue-200 bg-blue-50">
    <CardHeader>
      <CardTitle className="text-2xl flex items-center text-blue-900">
        <MapPin className="w-6 h-6 mr-3 text-blue-600" />
        Service Location (for SEO)
      </CardTitle>
    </CardHeader>
    <CardContent className="space-y-6">
      <p className="text-sm text-blue-800">
        For online teaching events, specify the country and city you're primarily serving.
        This information will be used for SEO optimization and location-based discovery.
      </p>
      {/* Country and City fields */}
    </CardContent>
  </Card>
)}

{/* Location Section - For Offline */}
{teachingMode === 'Offline' && (
  <Card variant="elevated" className="shadow-xl">
    <CardHeader>
      <CardTitle className="text-2xl flex items-center text-gray-900">
        <MapPin className="w-6 h-6 mr-3 text-primary-600" />
        Physical Location Details
      </CardTitle>
    </CardHeader>
    <CardContent className="space-y-6">
      {/* Country, City, Address, Latitude, Longitude fields */}
    </CardContent>
  </Card>
)}
```

3. Data Submission Updates

File: frontend/src/pages/admin/AdminTeachingEditEventPage.tsx

Changes:

A. EventType Mapping:

- **Frontend field:** teachingMode ('Online' | 'Offline' | 'Hybrid')
- **Backend field:** eventType ('Online' | 'Offline')
- **Mapping logic:**

```
const eventType = formData.teachingMode === 'Hybrid' ? 'Online' : formData.teachingMode;
```

B. Conditional Location Data:

```
location: {
  country: formData.country || undefined,
  city: formData.city,
  address: (formData.teachingMode === 'Offline') ? formData.address : undefined,
  coordinates: (formData.teachingMode === 'Offline') ? {
    lat: parseFloat(formData.latitude) || 0,
    lng: parseFloat(formData.longitude) || 0
  } : undefined
}
```

C. Meeting Link:

```
meetingLink: (formData.teachingMode === 'Online' || formData.teachingMode === 'Hybrid')
  ? formData.meetingLink
  : undefined
```

D. Validation Updates:

```
// Country and city are required for all event types
if (!formData.country?.trim()) newErrors.country = 'Country is required';
if (!formData.city?.trim()) newErrors.city = 'City is required';

// Address required only for offline
if (formData.teachingMode === 'Offline' && !formData.address?.trim()) {
  newErrors.address = 'Address is required for offline teaching';
}

// Meeting link required for online/hybrid
if ((formData.teachingMode === 'Online' || formData.teachingMode === 'Hybrid')
  && !formData.meetingLink?.trim()) {
  newErrors.meetingLink = 'Meeting link is required for online/hybrid teaching';
}
```

Backend Integration

Endpoints Used:

1. Fetch Teachers

- Endpoint: GET /api/admin/teaching-events/teachers
- Response: Array of teachers with _id, fullName, email

2. Create Teaching Event

- Endpoint: POST /api/admin/teaching-events
- Payload: Full teaching event data with:
 - eventType: 'Online' | 'Offline'
 - meetingLink: For online/hybrid events
 - location: With country, city, address (conditional)
 - teacherId: Teacher ObjectId

3. Update Teaching Event

- Endpoint: PUT /api/admin/teaching-events/:id
- Payload: Same as create
- Special endpoint: PUT /api/admin/teaching-events/:id/change-teacher (for changing teacher only)

Backend Model: ITeachingEvent

```

interface ITeachingEvent {
  teacherId: mongoose.Types.ObjectId; // Teacher reference
  eventType: 'Online' | 'Offline'; // Event type
  meetingLink?: string; // For online events
  location: {
    country?: string;
    city: string;
    address: string;
    coordinates: {
      lat: number;
      lng: number;
    };
  };
  seoMeta: {
    title: string;
    description: string;
    keywords: string[];
  };
  // ... other fields
}

```

SEO Optimization

For Online/Hybrid Events:

- Country and city from "Service Location" section are stored in:
 - location.country
 - location.city
- These are used for SEO and location-based discovery

For Offline Events:

- Full address, coordinates, country, and city are stored
- Used for physical location mapping and local SEO

SEO Meta:

- All events include `seoMeta` with title, description, and keywords
- Auto-populated from event title/description if not provided

Form Data Flow

```

AdminTeachingEditEventPage
├── TeachingBasicInfoTab
│   ├── Teacher Dropdown
│   ├── Category Dropdown
│   ├── Teaching Type
│   ├── Teaching Mode (Online/Offline/Hybrid)
│   └── Other basic fields
├── TeachingSchedulePricingTab
│   └── Schedule & pricing data
└── TeachingAdvancedTab
    ├── For Offline:
    │   ├── Country & City (location)
    │   ├── Address (required)
    │   └── Coordinates (optional)
    ├── For Online/Hybrid:
    │   ├── Country & City (SEO)
    │   └── Meeting Link (required)
    ├── FAQs
    └── SEO Meta

```

Validation Rules

Required Fields:

- **Title:** Required
- **Description:** Required
- **Category:** Required
- **Teacher:** Required (NEW)
- **Country:** Required (ALL event types)
- **City:** Required (ALL event types)
- **Address:** Required (OFFLINE only)
- **Meeting Link:** Required (ONLINE/HYBRID only)
- **Base Price:** Required
- **Date Schedule:** Required

Age Range:

- Both min and max required
- Max must be > Min
- Must be valid numbers

Price Validation:

- Must be numeric
- Must be ≥ 0

Files Modified

1. `frontend/src/components/admin/TeachingBasicInfoTab.tsx`
 - Added teacher dropdown with 3-column layout
2. `frontend/src/components/admin/TeachingAdvancedTab.tsx`
 - Conditional location fields based on event type
 - NEW service location section for online events
3. `frontend/src/pages/admin/AdminTeachingEditEventPage.tsx`
 - Updated form submission to map `teachingMode` to `eventType`
 - Conditional data in location object
 - Updated validation rules
 - Proper teacher ID handling

Testing Checklist

- ☐ Create new teaching event with Online type
 - ☐ Verify teacher dropdown loads
 - ☐ Select a teacher
 - ☐ Verify meeting link field appears
 - ☐ Verify service location (country/city) appears
 - ☐ Verify address field does NOT appear
- ☐ Create new teaching event with Offline type
 - ☐ Verify teacher dropdown loads
 - ☐ Verify meeting link field does NOT appear
 - ☐ Verify full location section appears (country, city, address, coordinates)
- ☐ Edit existing teaching event
 - ☐ Verify teacher is pre-selected
 - ☐ Change teacher and verify update
 - ☐ Verify conditional fields show based on event type
- ☐ Data submission

- ☐ Verify `eventType` is correctly mapped
 - ☐ Verify location data is conditional
 - ☐ Verify meeting link is sent for online events
 - ☐ Verify address is sent for offline events
 - ☐ Check network tab for correct payload
 - ☐ Backend validation
 - ☐ Check if date schedule validation works
 - ☐ Check if teacher validation works
 - ☐ Verify created/updated event data in database
-

Future Enhancements

1. Add bulk teacher assignment to multiple events
2. Add teacher filter in events list page
3. Add teacher profile link from event details
4. Implement teacher scheduling conflicts check
5. Add automatic timezone detection for online events
6. Add location-based event recommendations
