

Public APIs

Endpoints that don't require authentication - perfect for browsing and discovery.

Overview

These endpoints are publicly accessible and don't require authentication tokens. They're designed for:

- Event browsing and discovery
 - Category exploration
 - Basic system information
 - SEO-friendly content access
-

Events

GET /api/events

Browse all approved events with filtering and search.

Query Parameters:

- `page` (number): Page number (default: 1)
- `limit` (number): Items per page (default: 12, max: 50)
- `category` (string): Filter by category
- `type` (string): Event type ("Event", "Course", "Venue")
- `venueType` (string): Venue type ("Indoor", "Outdoor")
- `city` (string): Filter by city (case-insensitive)
- `minPrice` (number): Minimum price filter
- `maxPrice` (number): Maximum price filter
- `currency` (string): Currency filter ("AED", "USD", "EGP", "CAD")
- `ageMin` (number): Minimum age range
- `ageMax` (number): Maximum age range
- `featured` (string): "true" for featured events only
- `search` (string): Text search across title, description, tags
- `sortBy` (string): Sort field ("createdAt", "price", "viewsCount", "title")
- `sortOrder` (string): Sort order ("asc", "desc", default: "desc")

Example Request:

```
curl "http://localhost:5000/api/events?category=Music&city=Dubai&limit=5&featured=true"
```

Response:

```

}
}
```

Note: This endpoint automatically increments the `viewsCount` for analytics.

Venues

GET /api/venues

Browse available venues for events.

Query Parameters:

- `page` (number): Page number (default: 1)
- `limit` (number): Items per page (default: 10)
- `city` (string): Filter by city
- `venueType` (string): Filter by type ("indoor", "outdoor")
- `capacity` (number): Minimum capacity filter
- `search` (string): Search by name or description

Example Request:

```
curl "http://localhost:5000/api/venues?city=Dubai&capacity=500&limit=3"
```

Response:

```
{
  "success": true,
  "message": "Venues retrieved successfully",
  "data": {
    "venues": [
      {
        "_id": "venue_id_123",
        "name": "Dubai Convention Center",
        "description": "World-class convention center in the heart of Dubai",
        "address": {
          "street": "123 Business Bay Boulevard",

  }
}
```

System Information

GET /api

Health check and basic system information.

Example Request:

```
curl http://localhost:5000/api
```

Response:

```
{
  "message": "Welcome to the Gema API!",
  "version": "1.0.0",
  "timestamp": "2024-03-16T10:30:00.000Z",
  "status": "healthy"
}
```

GET /api/health

Detailed system health check.

Example Request:

```
curl http://localhost:5000/api/health
```

Response:

```
{
  "success": true,
  "message": "System healthy",
  "data": {
    "status": "healthy",
    "timestamp": "2024-03-16T10:30:00.000Z",
    "uptime": 1234567,
    "version": "1.0.0",
    "environment": "development",
    "database": {
      "status": "connected",
      "responseTime": 25
    },
    "services": {
      "firebase": "connected",
      "stripe": "connected",
      "cloudinary": "connected"
    }
  }
}
```

💡 Usage Tips

Caching

- **Event listings** are cached for 5 minutes
- **Categories** are cached for 1 hour
- **Individual events** have dynamic caching based on update frequency

Performance

- Use `limit` parameter to control response size
- Add specific filters to reduce data transfer
- Featured events are optimized for faster loading

SEO Optimization

- All public endpoints return SEO-friendly data
- Meta tags and descriptions are included for events
- Structured data is available for search engines

Next Steps:
