

Venues & Vendors APIs

Complete documentation for venue management and vendor operations.

Overview

The Venues & Vendors system provides:

- **Venue Discovery:** Browse and search event venues publicly
- **Venue Management:** Create and manage venue listings
- **Vendor Profiles:** Comprehensive vendor profile management
- **Business Operations:** Business hours, social media, and operational settings
- **Analytics:** Performance tracking for vendor businesses

Venue Management

GET /api/venues

Browse all available venues with filtering capabilities.

Authentication: Not required

Query Parameters:

- **page (number):** Page number (default: 1)
- **limit (number):** Items per page (default: 10, max: 50)
- **city (string):** Filter by city (case-insensitive)
- **venueType (string):** Filter by venue type ("indoor", "outdoor")
- **capacity (number):** Minimum capacity filter
- **minPrice (number):** Minimum rental price filter
- **maxPrice (number):** Maximum rental price filter
- **currency (string):** Currency filter ("AED", "USD", "EUR")
- **facilities (string):** Comma-separated facilities filter
- **search (string):** Search by venue name or description
- **sortBy (string):** Sort field ("name", "capacity", "baseRentalPrice", "rating")
- **sortOrder (string):** Sort order ("asc", "desc", default: "asc")

Example Request:

```
curl "http://localhost:5000/api/venues?city=Dubai&capacity=500&venueType=indoor&limit=5"
```

Response:

```

```

POST /api/venues

Create a new venue listing (Vendor authentication required).

Authentication: Required (Vendor role)

Headers:

```
Authorization: Bearer <access_token>
Content-Type: application/json
```

Request Body:

```
{
  "name": "Grand Event Hall",
  "description": "A beautiful and spacious venue perfect for weddings, corporate events, and
celebrations.",
  "address": {
    "street": "456 Marina Walk",
    "city": "Dubai",
    "state": "Dubai",
    "country": "UAE",
    "zipCode": "12345"
  },
  "coordinates": {
    "lat": 25.2048,
    "lng": 55.2708
  },
  "capacity": 800,
  "venueType": "indoor",
  "facilities": [
    "parking",
    "wifi",
    "catering",
    "av_equipment",
    "air_conditioning",
    "dance_floor",
    "stage"
  ],
  "baseRentalPrice": 8000,
  "currency": "AED",
  "operationalDetails": {
    "setupTime": 3,
    "cleanupTime": 2,
    "minimumRentalHours": 6,
    "cancellationPolicy": "72 hours notice required for full refund",
    "securityDeposit": 3000
  },
  "checkInGates": [
    {
      "name": "Main Entrance",
      "location": "Ground floor, Marina Walk entrance"
    }
  ],
  "accessRules": "Valid ID required. No smoking inside the venue."
}
```

Response:

```
{
  "success": true,
  "message": "Venue created successfully and is pending admin approval",
  "data": {
    "venue": {
      "_id": "new_venue_id",
      "name": "Grand Event Hall",
      "description": "A beautiful and spacious venue...",
      "owner": "vendor_id",
      "isApproved": false,
      "status": "PENDING_APPROVAL",
      "createdAt": "2024-03-16T10:30:00.000Z"
    }
  }
}
```

PUT /api/venues/id

Update venue information (Venue owner/Admin authentication required).

Authentication: Required (Venue owner or Admin)

Headers:

```
Authorization: Bearer <access_token>
Content-Type: application/json
```

Path Parameters:

- `id` (string): Venue MongoDB ObjectId

Request Body: Same structure as POST `/api/venues` (partial updates allowed)

Response:

```
{
  "success": true,
  "message": "Venue updated successfully",
  "data": {
    "venue": {
      "_id": "venue_id",
      "name": "Updated Venue Name",
      "updatedAt": "2024-03-16T14:30:00.000Z"
    }
  }
}
```

DELETE `/api/venues/:id`

Delete/deactivate a venue (Venue owner/Admin authentication required).

Authentication: Required (Venue owner or Admin)

Headers:

```
Authorization: Bearer <access_token>
```

Path Parameters:

- `id` (string): Venue MongoDB ObjectId

Response:

```
{
  "success": true,
  "message": "Venue deleted successfully"
}
```

Vendor Profile Management

GET `/api/vendors/profile`

Get current vendor's profile information.

Authentication: Required (Vendor role)

Headers:

```
Authorization: Bearer <access_token>
```

Response:

```
{
  "success": true,
  "message": "Vendor profile retrieved successfully",
  "data": {
    "vendor": {
      "_id": "vendor_id",
      "firstName": "Ahmed",
      "lastName": "Events Co",
      "email": "ahmed@eventsco.com",
      "phone": "+971501234567",
      "avatar": "https://cloudinary.com/vendor-avatar.jpg",
      "role": "vendor",
      "businessName": "Ahmed Events & Entertainment",
    }
  }
}

File Upload Management

POST /api/vendors/upload-image

Upload vendor images including avatar, logos, and portfolio images.

Authentication: Required (Vendor role)

Headers:

```
Authorization: Bearer <access_token>
Content-Type: multipart/form-data
```

Request Body (multipart/form-data):

- avatar (file): Vendor avatar/profile image
- logo (file): Business logo
- coverImage (file): Cover/banner image
- portfolio (files): Portfolio images (multiple files allowed)

Example Request:

```
curl -X POST http://localhost:5000/api/vendors/upload-image \
-H "Authorization: Bearer YOUR_ACCESS_TOKEN" \
-F "avatar=@vendor-avatar.jpg" \
-F "logo=@business-logo.png"
```

Response:

```

{
  "success": true,
  "message": "Vendor images uploaded successfully",
  "data": {
    "vendor": {
      "_id": "vendor_id",
      "avatar": "https://cloudinary.com/vendor-avatar-new.jpg",
      "logo": "https://cloudinary.com/business-logo-new.png",
      "updatedAt": "2024-03-16T15:00:00.000Z"
    },
    "uploadedFiles": [
      {
        "fieldName": "avatar",
        "url": "https://cloudinary.com/vendor-avatar-new.jpg",

        "mimetype": "image/png"
      }
    ]
  }
}

```

Implementation Examples

Venue Search with Filters

```

// Advanced venue search with multiple filters
const searchVenues = async (filters) => {
  const params = new URLSearchParams({
    city: 'Dubai',
    venueType: 'indoor',
    capacity: 500,
    facilities: 'parking,wifi,catering',
    sortBy: 'rating',
    sortOrder: 'desc',
    ...filters
  });

  const response = await fetch(`/api/venues?${params}`);
  const data = await response.json();

  return data.success ? data.data.venues : [];
};

// Usage
const venues = await searchVenues({
  minPrice: 5000,
  maxPrice: 20000,
  currency: 'AED'
});

```

Vendor Dashboard Component

```
// React component for vendor dashboard
const VendorDashboard = () => {
  const [stats, setStats] = useState(null);
  const [events, setEvents] = useState([]);

  useEffect(() => {
    const fetchDashboardData = async () => {
      const [statsResponse, eventsResponse] = await Promise.all([
        fetch('/api/vendors/stats', {
          headers: { 'Authorization': `Bearer ${accessToken}` }
        }),
        fetch('/api/vendors/events?limit=5&status=active', {
          headers: { 'Authorization': `Bearer ${accessToken}` }
        })
      ])

      const statsData = await statsResponse.json();
      const eventsData = await eventsResponse.json();

      setStats(statsData.data);
      setEvents(eventsData.data.events);
    };

    fetchDashboardData();
  }, []);

  return (
    <div className="vendor-dashboard">
      <div className="stats-overview">
        <div className="stat-card">
          <h3>Total Events</h3>
          <p>{stats?.overview.totalEvents}</p>
        </div>
        <div className="stat-card">
          <h3>Total Revenue</h3>
          <p>{stats?.overview.totalRevenue} AED</p>
        </div>
        <div className="stat-card">
          <h3>Active Bookings</h3>
          <p>{stats?.overview.totalBookings}</p>
        </div>
      </div>

      <div className="recent-events">
        <h3>Recent Events</h3>
        {events.map(event => (
          <div key={event._id} className="event-card">
            <h4>{event.title}</h4>
            <p>Bookings: {event.totalBookings}</p>
            <p>Revenue: {event.totalRevenue} {event.currency}</p>
          </div>
        ))}
      </div>
    </div>
  );
};
```

Business Hours Manager

```
// Business hours management utility
const BusinessHoursManager = {
  // Convert business hours to display format
  formatBusinessHours: (businessHours) => {
    const days = ['monday', 'tuesday', 'wednesday', 'thursday', 'friday', 'saturday', 'sunday'];

    return days.map(day => {
      const dayInfo = businessHours[day];
      return {
        day: day.charAt(0).toUpperCase() + day.slice(1),
        isOpen: dayInfo.isOpen,
        hours: dayInfo.isOpen
          ? `${dayInfo.openTime} - ${dayInfo.closeTime}`
          : 'Closed'
      };
    });
  },

  // Update business hours
  updateBusinessHours: async (newHours) => {
    const response = await fetch('/api/vendors/business-hours', {
      method: 'PUT',
      headers: {
        'Authorization': `Bearer ${accessToken}`,
        'Content-Type': 'application/json'
      },
      body: JSON.stringify({ businessHours: newHours })
    });

    const result = await response.json();

    if (!result.success) {
      throw new Error(result.message);
    }

    return result.data.vendor;
  }
};
